

New “Flight Guard” Feedrolls

Johnson’s innovative patent feed rollers will enable you to lower your debarker pressure, thanks to a variety of inter-changing inserts. This will help reduce fibre damage and improve log centering, while maintaining a solid grip during the debarking process. This new, inter-changing insert attachment concept is designed to lower your maintenance cost by allowing you to quickly replace the inserts with the removal of a few bolts. This will refurbish the roll itself without any welding required. All our feed rollers are fabricated to original manufacturer specifications however Johnson can also manufacture feed rollers to all of your requirements or specifications.

Newly Designed Spike Roll and Spike Bars

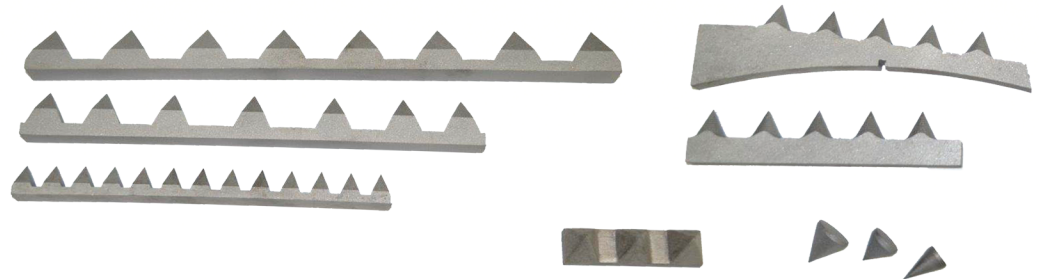

Spike Rolls

Johnson's newly designed roll is a new addition to our original line up. It adheres to the same characteristics as the rest of our collection by enabling you to lower your debarker pressure, helping to reduce log fibre damage and improve log centering. All of this while maintaining a solid grip during the debarking process. These special rollers will also lower your maintenance cost thanks to quick-change spike bars.

Spike Bars

Johnson's unique patented design of spike bars allows you to refurbish your feed roller with a breeze. The pyramid design allows you to lower your debarker pressure, while maintaining a solid grip in the debarking process. Our clients used them for many more different applications.

The new spikes and new rolls are now available. For more information, don't hesitate to contact your representative or our customer service
