

WOLFTEK

Manufacturing. Distribution. Design.

WOLFTEK is proud to expand our high performance user and environmentally friendly cleaners & lubricants from Supersaul Chemmex

WOLFTEK SS3

SS3 makes easy clean-up of oils & greases. It is designed as a user & environment friendly cleaning solution. Very mild pleasant odour, gentle for user, designed as a replacement for Varsol in general parts washing and in wash/dunk tanks.

WOLFTEK 9000

Wolftek BioTek 9000 works great in a dunk tank for saws and planer knives or on light pitch you can brush/spray it on, let sit for a few minutes and wipe with a cloth or scrape off. Not to be used on aluminum, brass or copper. Used extensively in Saw & Planer mill applications on rolls, guides and plates.

WOLFTEK C-9 SE

C-9 is a very effective, yet reasonably gentle pitch remover and degreaser. C-9 is designed to be used on any forestry equipment or structures but especially on sensitive metal where conventional cleaners are too aggressive. Examples are Aluminium, Brass, and Copper. C-9 works at room temperature with low pressure. C-9 will stick to surfaces for longer and work passively without the need for scrubbing or high pressure washing making the end users job safer and easier. Excellent solution for radiators, canters and dunk tanks.

WOLFTEK Air System Lubricant

Air System Lube has been developed with performance and user friendliness in mind. Safe for workers, when it becomes airborne from the air system. Will prevent sluggish valves and cylinders. Will not mix with or be washed away by water.

Products are stocked and shipped from Prince George or direct from the manufacturer.
