

Planer Upgrades

by Wolftek

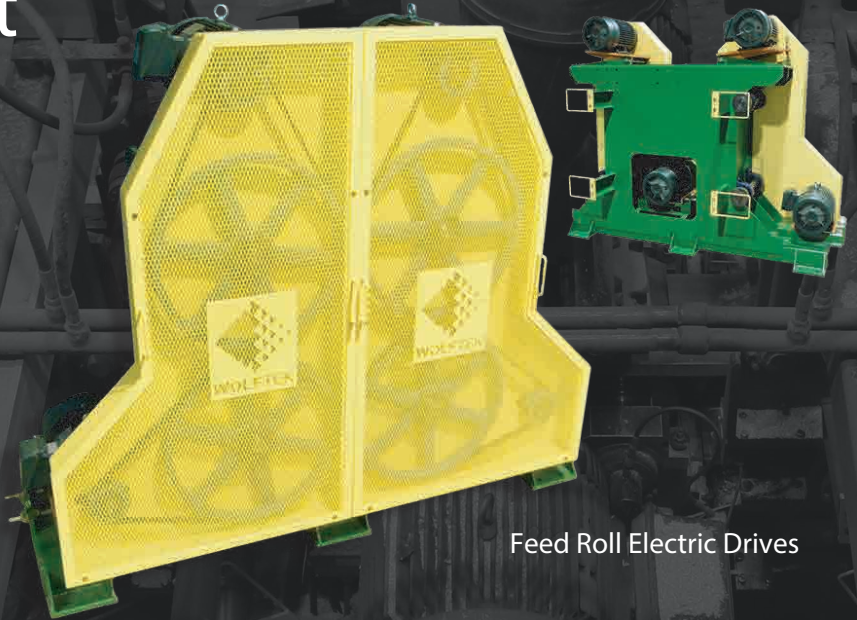

You Want The Best You Got The Best

Wolftek has been leading the pack in planer innovation for 30 years!

The Wolftek Dynamic Tensioning System (DTS) can be installed with your existing feed system to improve production speed and reduce the impact on wear parts.

Retrofit options for feed-roll electric drives & electric side head motor conversions make mills more efficient and reduce maintenance.

Wolftek's automated networks are fast, accurate and remarkably simple. Set time is reduced and parts last longer.

Feed Roll Electric Drives

Wolftek DTS with Roll

Design Features and Benefits

Dynamic Tensioning System (DTS)

- Wolftek's DTS is "FAST IN SPEED-SOFT ON WOOD" Our proprietary DTS software works to catch and accelerate lumber unlike conventional airbag systems.

Feedroll Electric Drives

- Electric Drives replace older chain/hydraulic systems and provide more consistent feeding and throughput, lower energy consumption and reduced maintenance.

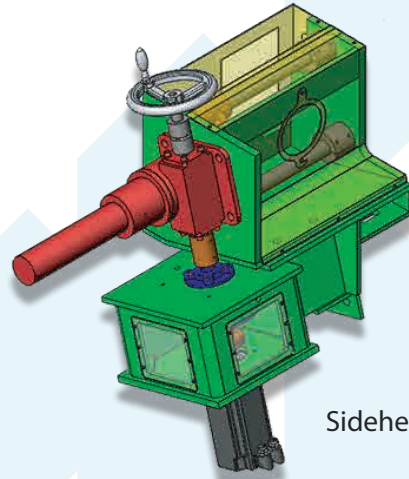

Automated Networks by Wolftek

- Fast, accurate and simple to use networks are available for both top and side heads.
- Calibration is done through QC testing and simply inputting the product dimension into the interface software.
- In case of maintenance Wolftek's technology still allows for manual operation with hand cranks.

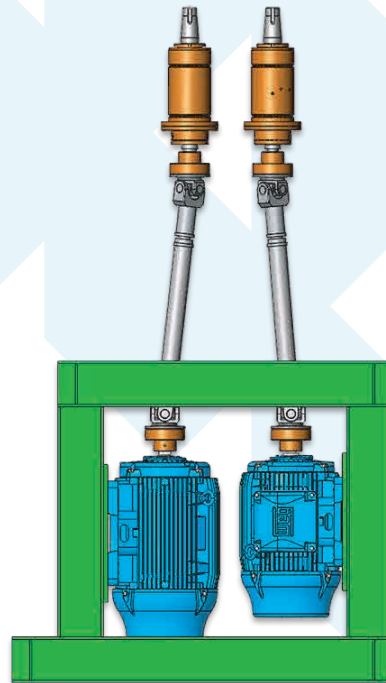

Side Head Motor Conversion

- More control over speed and higher horse power result in elevated throughput and product quality.
- New electric motor technology is more efficient and require less maintenance.

Call or visit Wolftek's website today for information and to see how this system can benefit your company.
